

## FiberCab FCL Series

## Introducing the FCL Series

## With Features that Make Sense

The FiberCAB FCL Series is built on 30+ years of experience building production laser and CNC equipment. With 3 space saving sizes to choose from, the FCL Series is ideal when floor space is limited but highly accurate cutting capabilities are still required.

This newest series in the FiberCab cutting line utilizes the latest in motion control developments and has an entirely redesigned drive system. With all ironless linear motors mounted to a thermally stable granite base, the FCL system is capable of extremely high accelerations while maintaining accuracies to .0002" (.0005mm).

capabilities combined

with the industry's most

energy efficient footprint.

This high speed laser cutting platform is a true Laser Machinina Center ideal for small to micro part processing. It is automation readv and comes with a host of options.

Pneumatic clamps to hold down small substrates

Solid granite integrated into the base

All ironless linear motor

Optional vision with integrated software tools

FCL44

- Featuring all linear motor drives
- Accels to 1.5gs
- Cutting speeds to 4000 ipm
- Granite base structure for ultra accuracy and stability
- Fully adjustable pneumatic material clamps for support free cutting of thin sheet stock
- A full range of laser power options
- Fully enclosed cutting area with safety interlocks and LED lighting
- Rugged integrated machine interface with a full graphic display and total machine/program control right at the machine console
- On the fly job edits

## A Rich History of Providing Solutions
